                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC nucleic acids of tuf, fus, atpD and/or recA genes from which probes CC and/or primers are derived. The method comprises amplifying the nucleic CC acids of determined algal, archaeal, bacterial, fungal and parasitical Species with a combination of defined primer pairs. The method can be CC used for producing probes and/or primers for detecting one or more CC used for producing probes and/or primers for detecting one or more CC parasites, for universal detection and for specific and ubiquitous CC detection and identification of an algal, archaeal, bacterial, fungal CC and parasitical species, genus, family and group. A nucleic acid (I) CC obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the CC detection of at least one antinicrobial agent resistance gene or at CC ubiquitous detection and for identification of Streptococcus pneumoniae. CC (I) can be used to design a therapeutic agent which is effective against CC unicroorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., CC Corynebacteriaceae family, Pseudomonads group, Streptococcus sp., CC Nelsseria gonorrhoeae and Staphylococcus sp.. Using DNA based tests CC provides faster results than substrate specificity tests as results can be used for the specific and increase and improved accuracy is less as increase.

```
cc acids of determined algal, archaeal, bacterial, fungal and parasitical cospecies with a combination of defined primer pairs. The method can be cused for producing probes and/or primers for detecting one or more cc used for producing probes and/or primers for detecting one or more cc related microorganisms e.g. algae, archaea, bacteria, fungi and combinations of an algae, archaeal, bacterial, fungi and comparasities, for universal detection and for specific and ubiquitous cdetection and identification of an algal, archaeal, bacterial, fungal cc and parasities and using the method of the invention can be used for the universal contection of any bacterium, fungus or parasite in a sample and for the cdetection of any bacterium, fungus or parasite in a sample and for the cleast one toxin gene. hexA nucleic acids are used for the specific and cubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against corroorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia addacens, Bordetella sp., cc Corynebacteriaceae family, Pseudomonads group, Escherichia coli, colidate in a sample and staphylococcus sp. Using DNA based tests convolved in an hour and improved accuracy is also achieved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    nucleic acids of tuf, fus, atpD and/or recA genes from which pro and/or primers are derived. The method comprises amplifying the acids of determined algal, archaeal, bacterial functions
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim

                                                                                                                                                                                                                                                                                                                                                            멍
                                                                                                                                                                                                                                                                                                                                                                                 Crelated microorganisms e.g. algae, archaea, bacteria, fungi and Comparasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal CC and parasitical species, genus, family and group. A nucleic acid (I) CC detection of any bacterium, fungus or parasite in a sample and for the CC detection of any bacterium, fungus or parasite in a sample and for the CC least one toxin gene. hexA nucleic acids are used for the specific and CC ubiquitous detection and for identification of Streptococcus pneumoniae. CC (I) can be used to design a therapeutic agent which is effective against CC microorganisms. Microbial species or genus or family or phylum or group CC which can be detected include Abiotrophia adiacens, Bordetella sp., CC Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, CC Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., CC Neisseria gonorrhoeae and Staphylococcus sp., Using DNA based tests CC provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved.

CC AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                Query Match

The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and

                                                                                                                                                                                 detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hexA nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abittrophia addiscens.
                                                                                                                                                                                                                                                                                                                                                               acids of determined algal, archaeal, bacterial, fungal and parasit: species with a combination of defined primer pairs. The method can used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous
                                                                   which can be detected include Abiotrophia adiacens, Bordetella sp., Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria gonorrhoeae and Staphylococcus sp. Using DNA based tests provides faster results than substrate specificity tests as results be determined in an hour and improved accuracy is also achieved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                망
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Ω
CC rucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic cc acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be cused for producing probes and/or primers for detecting one or more crelated microorganisms e.g. algae, archaea, bacteria, fungi and cparasites, for universal detection and for specific and ubiquitous certains and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) cobtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the cottent of any bacterium, fungus or parasite in a sample and for the cottent of any bacterium fungus or parasite in a sample and for the cottent of any bacterium fungus or parasite in a sample and for the cottent of any bacterium, fungus or parasite in a sample and for the cottent of any bacterium fungus or parasite in a sample and for the cottent of any bacterium, fungus or parasite in a sample and for the cottent of any bacterium, fungus or parasite in a sample and for the cottent of any bacterium, fungus or parasite in a sample and for the cottent of any bacterium can be used for the specific and cottent on the cottent of any bacterium fungus or parasite in a sample and for the cottent of any bacterium fungus or parasite in a sample and for the cottent of any bacterium fungus or parasite in a sample and for the cottent of any bacterium fungus or parasite in a sample and for the cottent of any bacterium fungus or parasite in a sample and for the cottent of any bacterium fungus or parasite in a sample and for the cottent of the cotte
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ubiquitous detection and for identification of Streptococcus pneumoniae. (1) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria gonorrhoeae and Staphylococcus sp. Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             microorganism; diagnosis; translation elongation factor Tu; toxin; translation elongation factor G; RecA recombinase; resistance; catalytic subunit of proton-translocating ATPase; antimicrobial;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1739
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        1919

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         CC nucleic acids of tut, fus, atpD and/or recA genes from which probes cand/or primers are derived. The method comprises amplifying the nucleic cacids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more crelated microorganisms e.g. algae, archaea, bacteria, fungi and parasitical species and identification of an algal, archaeal, bacterial, fungal and comparasities, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal conditions are used for the universal detection of an algal, archaeal, bacterial, fungal conditions are used for the universal detection of any bacterium, fungus or parasite in a sample and for the conditions of a sample and for the conditions of the sample and for the conditions of at least one antimicrobial agent resistance gene or at constitutions detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., corrected include Abiotrophia adiacens, Bordetella sp., in the condition of its conditions. Escherichia coli:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria gonorrhoeae and Staphylococcus sp. Using DNA based tests provides faster results than substrate specificity tests as results be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/prc which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1962

The present invention describes a method for generating a repertory of CC nucleic acids of tuf, fus, atpD and/or recA genes from which probes CC and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical Species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more CC used for producing probes and/or primers for detecting one or more cc related microorganisms e.g. algae, archaea, bacteria, fungal and garasities, for universal detection and for specific and ubiquitous CC detection and identification of an algal, archaeal, bacterial, fungal acc detection of any bacterium, fungus or parasite in a sample and for the contained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the cleast one toxin gene. hexa nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. CC (1) can be used to design a therapeutic agent which is effective against combined and for identification of streptococcus pneumoniae. CC wynobacterium sp. Enterobacteriaceae group, Escherichia coli, corynebacterium sp. Enterobacteriaceae group, Escherichia coli, corynebacterium sp. Enterobacteriaceae group, Escherichia coli, corynebacterium sp. Enterobacteriaceae group, Escherichia coli, corynebacteriaceae family, Pseudomonads group, Streptococcus sp. Using DNA based tests con be determined in an hour and improved accuracy is also achieved.

CC hallough to AaH00010 to AaH002304 represent nucleotide sequences and primers/probes carious which are result to the accuracy in a few present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of archaeal, bacterial, fungal and parasitical species in a test same
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim

The present invention describes a method for generating a repertory of CC nucleic acids of tuf, fus, atpl and/or recA genes from which probes CC and/or primers are derived. The method comprises amplifying the nucleic cc acids of determined algal, archaeal, bacterial, fungal and parasitical CC species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more CC related microorganisms e.g. algae, archaea, bacteria, fungi and CC parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal and parasitical species, genus, family and group. A nucleic acid (I) CC obtained using the method of the invention can be used for the universal CC detection of any bacteriam, fungus or parasite in a sample and for the CC least one toxin gene. hexA nucleic acids are used for the specific and CC ubiquitous detection and for identification of Streptococcus pneumoniae. CC (I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., CC Mycobacterium sp., Enterobacteriaceae group, Escherichia coli, CC Mycobacteriaceae and Stabhylococcus sp. Using NAA hased tests
                                                                                                           Matches
                                                                                                                                     Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ОÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Qγ
     The present invention describes a method for generating a repertory of concleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic conditions of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be considered microorganisms e.g. algae, archaea, bacteria, fungal and parasitical species with a combination of an algal, archaea, bacteria, fungal and considered microorganisms e.g. algae, archaea, bacteria, fungal and considered microorganisms e.g. algae, archaea, bacteria, fungal and considered microorganisms e.g. algae, archaea, bacteria, fungal and considered using the method of an algal, archaeal, bacterial, fungal conditions of any bacterium, fungus or parasite in a sample and for the considered using the method of the invention can be used for the universal detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hexA nucleic acids are used for the specific and considered to design a therapeutic agent which is effective against considered to design a therapeutic agent which is effective against considered include Abiotrophia adiacens, Bordetella sp., considered in an appeal and staphylococcus sp. Using DNA based tests considered in an hour and improved accuracy is also achieved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         RESULT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1020
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1153
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample -

nucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       microorganism; diagnosis; translation elongation factor Tu; toxin; translation elongation factor G; RecA recombinase; resistance; catalytic subunit of proton-translocating ATPase; antimicrobial;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δÃ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and parasitical species, genus, family and group. A nucleic acid (1) obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hexA nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (1) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., Corynebacterium sp., Enterobacteriaceae group, Escherichia coll, Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., Neisseria concernace and Strahlylococcus sp.
                                                                                                                                                                                                                                                                                                                                                                       identification; algal; archaeal; bacterial; fungal; parasitical; microorganism; diagnosis; translation elongation factor Tu; toxin; translation elongation factor G; RecA recombinase; resistance; catalytic subunit of proton-translocating ATPase; antimicrobial;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Neisseria gonorrhoeae and Staphylococcus sp.. Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention describes a method for generating a repertory of CC nucleic acids of tuf, fus, atpb and/or recA genes from which probes CC and/or primers are derived. The method comprises amplifying the nucleic CC acids of determined algal, archaeal, bacterial, fungal and parasitical CC species with a combination of defined primer pairs. The method can be CC used for producing probes and/or primers for detecting one or more CC related microorganisms e.g. algae, archaea, bacteria, fungi and CC parasites, for universal detection and for specific and ubiquitous CC detection and identification of an algal, archaeal, bacterial, fungal CC and parasitical species, genus, family and group. A nucleic acid (I) CC obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the CC detection of at least one antimicrobial agent resistance gene or at least one toxin gene. hexa nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. CC (I) can be used to design a therapeutic agent which is effective against CC microorganisms. Microbial species or genus or family or phylum or group CC Corynebacteriaceae family, Pseudomonads group, Escherichia coll.

CC Mycobacteriaceae family, Pseudomonads group, Escherichia coll.

CC Neisseria gonorrhoeae and Staphylococcus sp. Using DNA based tests CC unit of the analysis of the specific can be determined in an hour and improved accuracy is also achieved.

CC AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

and parasitical species, genus, family and group. A nucleic acid (1) cobtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the universal content of at least one antimicrobial agent resistance gene or at least one toxin gene. hexA nucleic acids are used for the specific and ubiquitous detection and for identification of Streptcococus pneumoniae. (1) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., Corynebacterium sp., Enterobacteriaceae group, Escherichia coli, Nycobacteriaceae family, Pseudomonads group, Streptcoccus sp. Weisseria gonorrhoeae and Staphylococcus sp. Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved.

The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal and parasitical sending companies and archaeal bacterial and identification of an algal, archaeal, bacterial, fungal and parasitical sending acount a nucleic acid.                                                                                                                                                                                                                                             Š
                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a method for generating a repertory of CC nucleic acids of tuf, fus, atpD and/or recA genes from which probes CC and/or primers are derived. The method comprises amplifying the nucleic CC acids of determined algal, archaeal, bacterial, fungal and parasitical CC species with a combination of defined primer pairs. The method can be CC used for producing probes and/or primers for detecting one or more CC related microorganisms e.g. algae, archaea, bacteria, fungi and CC parasites, for universal detection and for specific and ubiquitous CC detection and identification of an algal, archaeal, bacterial, fungi and CC contained using the method of the invention can be used for the universal CC detection of any bacterium, fungus or parasite in a sample and for the CC detection of any bacterium, fungus or parasite in a sample and for the CC detection of any bacterium, fungus or parasite in a sample and for the CC detection of any bacterium of indentification of streptococcus pneumoniae. CC (1) can be used to design a therapeutic agent which is effective against CC microorganisms. Microbial species or genus or family or phylum or group CC which can be detected include Abiotrophia adiacens, Bordetella sp., CC Mycobacteriaceae family, Pseudomonads group, Escherichia coli, CC Mycobacteriaceae family, Pseudomonads group, Escherichia coli, CC Mycobacteriaceae family, Pseudomonads group, Escherichia coli, CC provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved.

CC AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                Matches

                                                                                                                                                                                                                                                                                                                                                                                                           A polymerase chain reaction (PCR) assays have been developed for CC detecting an antibiotic resistant strain of Streptococcus pneumoniae CC using primers based on the penicillin binding protein 2B (pbp2B) gene CC und the pbp1A gene. The products and methods can be used for detecting CC s. pneumoniae, particularly antibiotic-resistant strains. They can be CC used for simultaneously diagnosing pneumococcal meningitis and CC identifying any antibiotic-resistant S. pneumoniae strains in a sample. CC The methods can be used for detecting S. pneumoniae strains in a sample. CC The methods can be used for detecting S. pneumoniae strains resistant CC to antibiotics, e.g. beta-lactam antibiotics, preferably penicillin. CC The assays can be used to detect other pathogens causing meningitis. CC S. pneumoniae with a minimum inhibitory concentration (MIC) of CS. pneumoniae with a minimum inhibitory concentration (MIC) of CC. 25-1 micro g/ml where the PCR products detected are a 1043 bp and CC a 224 bp product. The present sequence represents a Streptococcus CC pneumoniae bpp1A transpeptidase encoding region (TER) isolate nucleotide

The present invention describes a method for generating a repertory of conucleic acids of tuf, fus, atpD and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic acids of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be used for producing probes and/or primers for detecting one or more related microorganisms e.g. algae, archaea, bacteria, fungi and parasites, for universal detection and for specific and ubiquitous detection and identification of an algal, archaeal, bacterial, fungal and parasites, for universal detection and algal, archaeal, bacterial, fungal detection and identification of an algal, archaeal, bacterial, fungal detection of any bacterium, fungus or parasite in a sample and for the obtained using the method of the invention can be used for the universal detection of at least one antimicrobial agent resistance gene or at least one antimicrobial agent resistance gene or at least one toxin gene. hexh nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microorganisms. Microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., Corvenbacterium en Esterotropia agent resistance.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      microorganism; diagnosis; translation elongation factor Tu; toxin; translation elongation factor G; RecA recombinase; resistance;

The present invention describes a method for generating a repertory of concleic acids of tuf, fus, atpp and/or recA genes from which probes and/or primers are derived. The method comprises amplifying the nucleic conclusion of determined algal, archaeal, bacterial, fungal and parasitical species with a combination of defined primer pairs. The method can be cused for producing probes and/or primers for detecting one or more cused for producing probes and/or primers for detecting one or more cused for universal detection and for specific and ubiquitous cused for universal detection and for specific and ubiquitous cused for universal detection and for specific and ubiquitous cused for the species, genus, family and group. A nucleic acid (I) obtained using the method of the invention can be used for the universal detection of at least one antimicrobial agent resistance gene or at cleast one toxin gene. hexa nucleic acids are used for the specific and ubiquitous detection and for identification of Streptococcus pneumoniae. (I) can be used to design a therapeutic agent which is effective against microbial species or genus or family or phylum or group which can be detected include Abiotrophia adiacens, Bordetella sp., conversed tests against general agency agenc
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          microorganism; diagnosis; translation elongation factor Tu; toxin; translation elongation factor G; RecA recombinase; resistance; catalytic subunit of proton-translocation areas.
                                                                                 Neisseria gonorrhoeae and Staphylococcus sp.. Using DNA based tests provides faster results than substrate specificity tests as results can be determined in an hour and improved accuracy is also achieved. AAH00010 to AAH002304 represent nucleotide sequences and primers/probes which are given in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 27; Page 1476; 1580pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 2001-245006/25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    28-SEP-2000;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Streptococcus pneumoniae.

The present invention describes a method for generating a repertory of CC nuclaic acids of tuf, fus, atpD and/or recA genes from which probes CC and/or primers are derived. The method comprises amplifying the nucleic CC acids of determined algal, archaeal, bacterial, fungal and parasitical Species with a combination of defined primer pairs. The method can be CC used for producing probes and/or primers for detecting one or more CC related microorganisms e.g. algae, archaea, bacteria, fungi and parasitical species, genus, family and group. A nucleic acid (I) cand parasitical species, genus, family and group. A nucleic acid (I) CC obtained using the method of the invention can be used for the universal detection of any bacterium, fungus or parasite in a sample and for the cettion of at least one antimicrobial agent resistance gene or at least one toxin gene. hexa nucleic acids are used for the specific and CC (I) can be used to design a therapeutic agent which is effective against CC (I) can be detected include Abiotrophia adiacens, Bordetella sp., CC (Mycobacteriaceae family, Pseudomonads group, Streptococcus sp., CC (Nycobacteriaceae family, Pseudomonads group, Streptococcus sp., CC (Nycobacteriaceae family, Pseudomonads group, Streptococcus sp., CC (Pseudomonads group), Strepto
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Nucleic acid sequences are used to generate universal probes and primers which can be used to identify and detect the presence of algal, archaeal, bacterial, fungal and parasitical species in a test sample -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Species specific; genus specific; family specific; probe; detectio identification; algal; archaeal; bacterial; fungal; parasitical; microorganism; diagnosis; translation elongation factor Tu; toxin; translation elongation factor G; RecA recombinase; resistance; catalytic subunit of proton-translocating ATPase; antimicrobial;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Claim 27; Page 1255; 1580pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   TATGATGACCGACATGATGAA 338
                  Submitted (07-SEP-2000) Genoscope - Centre National de Sequencage, 2 rue Gaston Cremieux, CP 5706, 91057 EVRY cedex, FRANCE. (E-mail: seqrefigenoscope.cns.fr - Web : www.genoscope.cns.fr) This GSS is part of a random genomic sequencing program of thirteen yeast species: Saccharomyces bayanus var. uvarum, Saccharomyces exiguus, Saccharomyces servazzii, Zygosaccharomyces rouxii, Saccharomyces kluyveri, Kluyveromyces thermotolerans, Kluyveromyces lactis var. lactis, Kluyveromyces marxianus var. marxianus, Pichia angusta, Debaryomyces hansenii var. hansenii, Pichia sorbitophila, Candida tropicalis and Yarrowia lipolytica. Genomic inserts of 3 to 5 kb were prepared and both extremities were sequenced. See

The cDNAs were then size-fractionated using Sephacryl S-00 column and then ligated into EcoRI and XhoI digested Lambda Zap Express vector. The ligation product was packaged using Gigapack II packaging extract. The library had primary titre of approx. 1x106. Clones from the primary library were randomly selected for single pass sequencing."

                                                                                                                                                                                               /note="A one year-old plant from the natural mangrove habitat in Pichavaram, Tamil Nadu, India was collected and brought to the M.S.Swaminatan Research Foundation. The whole plant was treated with the nutrient solution supplemented with 500 mM NaCl for 48 hours, Poly(A+)mRNA from the leaf tissue was purified and cDNA was prepared using Superscript Lambda System (Life Technologies, Cat. No. 19643-014). The cDNAs were size fractionated over SizeSep-400 spun column (Amersham-Pharmacia Biotech Cat No. 27-5105-01) and cloned in 5/Sal I - 3/Not I of pspORT1 (Life Technologies Cat. No. 15383-011). The ESTs were sequenced from the 5' end using M13/pUCl8 reverse primer in an Automated Sequencer (ABI310, Applied Biosystems) and submitted after editing to remove the vector and adapter sequences. BLAST search in BLASTX (Non-redundant)was carried out on 7th August, 2000 using default parameters and the results reported under
